

ASSEMBLY INSTRUCTIONS

RTS 8A63 GULF RACING SIGN

CONGRATULATIONS

Congratulations in choosing a unique product to enhance your slot car track diorama. This can truly be described as a product born from a love for slot cars. Buying this product have made you a member of a very special family, yes you are not dealing with a faceless business, but rather a family of slot car fanatics.

We put hours of skill and more importantly love into our products and it is wonderful to share our love for slot cars with you. May you enjoy the build and have years of joy having it as part of your trackside diorama.

This small structure is an imaginary sign displaying a well-known automotive product that has been around for a long time. This company is also a well-known racing team sponsor and this sign is paying tribute to their contribution to motor racing. We trust that this product will enhance your trackside diorama.

WARRANTY

This product is covered by a comprehensive money-back warranty to ensure your absolute satisfaction with your purchase.

WHO ARE WE?

This product is brought to you by racetrackscenics.com. If you have not done so already, please visit our website today. You are also most welcome to visit the Facebook pages “**Race Track Scenics Slot Car Scenery**” and “**Johan Malan**” to keep up to date with the latest developments and the launching of exciting new products that may be in the pipeline.

You can contact Kevin Sharpe on

Text in the USA 586 549 2879
WhatsApp 1-586-549-2879

for any assistance that you might require. Your feedback and a photo or two of your trackside addition will really be appreciated. We love to share in your joy!

WHAT IS IN THE KIT?

In this kit you will find all the laser cut pieced needed to assemble this product. The pieces are still intact in the sheets as they were cut to ensure that all the parts are there. Some of the loose bits inside pieces may have been removed, but they are not part of the finished product. In the section “FAMILIARIZE YOURSELF” below, you

will find diagram(s) that identify and explain each piece (component) that you are about to assemble. In the section “PREPARING THE CUT PIECES” below, you will learn how to proceed to prepare the pieces for assembly.

In the kit you will also find some optional pre-cut artwork printed on matt photo paper. This can be used to brand your finished product.

WHAT YOU WILL NEED

We have specifically designed this product so that it is easy to assemble with only a few basic tools. You will need the following:

- a screwdriver
- a sharp hobby knife
- some glue
- a few toothpicks
- a few earbuds can be handy
- a paintbrush or sponge roller and paint or a rattle can or two with spray paint.

There are really two schools of thought as to the right glue to use. Some people prefer a rapid setting glue like most gel super glues, while others prefer a slower setting glue like ordinary cold wood glue (pva glue). Sometimes more than one part must be assembled almost simultaneously and then a forgiving glue makes life a bit easier. Gluing the 26 steps into place may take a bit of time when you do it for the first time and a slower setting glue may just make life so much easier. Other times you may want a quick fix and then the rapid setting glue is the obvious choice. Our advice is to see what works best for you, there are no right or wrong, both types will produce a sturdy structure.

You will only need a small amount of glue and remember to look for the surfaces that will be in contact in the end and do not only apply glue to the lugs and sleeves. The latter restrict movement in one plane, but the glue fix it in the perpendicular plane. Using a toothpick is a handy way to apply glue and an earbud can be used to dab away any excess of glue (especially if you use wood glue).

If parts must be at a right angle, you can use any object to assist you in obtaining a square finished product in the end.

FAMILIARIZE YOURSELF

Have a look at some photos of the finished product.

Now have a look at the next diagram where all the laser cut parts are shown and numbered from **A** to **H**. We will identify each piece as well as where they fit in.

You will notice that this structure is made up of a large billboard (**A**) that is supported by two legs (**B 1-2**) that fits into two small foundations (**E 1-2**). The two signs, the shield shaped sign (**C**) and the flag shaped sign (**D**) are fixed to the billboard (**A**) with three short connectors (**F 1-3**) for the flag and three longer connectors (**G 1-3**) for the shield. Lastly you will notice some “shoes” (**H 1-4**) that fit on to the nubs of the legs (**B 1-2**). These shoes are then glued to the back of the billboard (**A**).

PREPARING THE CUT PIECES

Firstly, remove all the laser cut parts from the sheet. The sheet can be discarded. Clean the edges of the parts if there are any tiny bits where the parts were fixed to the sheets. This can be done with your knife or even your thumb nail.

We recommend that you start by sanding your finished product with a very light sandpaper to ensure a smooth finish for the end product.

WORD OF ADVICE

We would strongly advise you to do a quick dry assembly before you start gluing the laser cut parts together. Lay out all the parts on your work surface and make sure that the parts are not upside down or mirrored. In most instances it will make no difference, but in others it may be crucial to ensure a perfect product in the end.

Our laser cut parts are specifically cut to very fine tolerances to ensure a snug fit and therefore it is wise to check all fits before gluing parts together. You may need to trim a lug here and there to make assembly easier.

PAINTING YOUR PRODUCT

We would strongly advise you to finish the product with paint or wood stain to make them as appealing as possible. The parts should be primed (2 coats) and painted before final assembly. Spray paint can also be used to get a very smooth finish. Oil or water-based paint can be used and specialised paints like chalk paint can be used to give unique finishes.

Generally, it is highly advisable to paint/spray before gluing. You may not be able to get to the inside of the structure after it is glued together. Covering all the parts that must not be painted or sprayed with the same colour can be a tedious process. Pre-painting will avoid this process.

Please ensure that no paint clog a sleeve where a lug must fit in later. The tolerances are often so tight that too thick a layer of paint may cause problems. It is our experiences that a small foam roller instead of a brush, will produce a better finish and far less clogging of sleeves.

Applying a base or undercoat normally makes life easier afterwards. Two coats of primer are advisable because the MDF absorbs a lot of paint. Using a single colour

for the undercoat of all parts works quite well from personal experience. You can choose the paint of your preference, whether it is oil or water based. Cleaning brushes and rollers are just so much easier if you use a water base paint. A chalk paste can give a unique finish to walls and give a weathered look if so desired. If you prefer to protect the paint work of your structure you can always apply a clear spray coat.

LET'S GET STARTED WITH THE ASSEMBLY

Firstly, we will assemble the signs and the billboard. Have a look at the diagram above and glue the connectors (**F 1-3**) and (**G 1-3**) into the slots in the billboard (**A**) as marked on the diagram. Apply some gentle pressure to ensure a snug fit. Now you can proceed to firstly glue the flag shaped sign (**D**) onto the three short connectors (**F 1-3**) in the top right hand corner and then glue the shield shaped sign (**C**) onto the three longer connectors (**G 1-3**) in the middle of the billboard. Again, apply some gentle pressure to ensure a snug fit and set aside the sub-assembly to allow the glue to fully set.

Next, we will assemble the two legs. All that needs to be done is to glue the two small foundations (**E 1-2**) onto the nubs at the bottom of the two legs (**B 1-2**) and then to glue the four "shoes" (**H 1-4**) to the nubs on the front of the legs (**B 1-2**). Again, apply some gentle pressure to ensure a snug fit and set aside the two sub-assemblies to allow the glue to fully set.

Put the billboard sub-assembly on your work surface face down. You must elevate the sub-assembly above the work surface so that the foundations of the legs will be in the air when you fix them to the back of the billboard. A book or any other square object will come in handy. You also need a second square object to use as a guide to align the underside of the foundations. Now you can glue the two leg sub-assemblies to the back of the billboard. Only the "shoes" will make contact with the back of the billboard and needs some glue. It is advised to use a forgiving glue that don't set instantly so that you can turn your finished assembly upright to ensure that everything is plumb and square before the glue fully sets. You also want your foundations to make full contact with the ground.

FINISHING & BRANDING

We leave the finishing to your imagination and your taste. Do whatever you think will transform this into a structure that will compliment your race track diorama. We have included the artwork that can be glued to the structure. This artwork can be protected with a clear spray.

CONCLUSION

We sincerely hoped you have enjoyed this assembly and finishing. Please remember to give us some feedback and either send or post some pictures of this product on your track.
